

The area of visual field loss is shaded

How to Assess Ask the patient to cover one eye. Slowly move a finger or white examination pin from the upper left, upper right, lower left and then lower right, asking the patient to state when they can see the finger / pin. Repeat with the other eye.

Dear students,
this diagram demonstrates the visual field loss nicely with colour coding.

Remember

1. the visual field is the environment that you can see.
2. eyes are tested separately.
